

Grand Katia Fire Surround

Easy Fitting Instructions

Helpful Advice Before Fitting

- These instructions are provided in an easy to follow style. Simply follow the instructions in sequence to fit this product.
- Please retain all packaging until you have checked all the parts the parts list.
- To clean the surround we advise that you use a damp cloth and buff off with a soft, dry duster.
- Please note: if fitting a gas fire a CORGI registered gas fitter must be used to install your gas fire
- These instructions are guide only; there are various other methods of fitting this fireplace.
- We do not recommend this as a DIY installation and strongly advise using the services of a qualified installer
- Marble has been formed in the earth and is 100% natural and may vary slightly in colour and veining.

In the unlikely event that this product has missing or damaged parts, please call our **help line on 0870 224 2811** or e-mail helpline@adamsurrounds.co.uk for assistance or to obtain spare parts.

Tool List:

- Pencil
- Measuring tape
- Silicone adhesive
- Cement (If fitting a Gas Fire)
- Brackets for securing to the wall

Parts List:

Please ensure you have all the correct parts before beginning to fit this fire suite

- a) Hearth
- b) Legs left and right
- c) Front fascia
- d) Mantle

Fitting the hearth and positioning the legs

Carefully unpack the hearth part A and position, ensure the hearth is centralised to your fireplace opening. If installing an electric fire, ensure you have sufficient room for the power cable of your electric fire to run to the socket

If having a gas fire installed, prepare a bedding mixture, which can be sand and cement with an accelerator added to speed up hardening, or a special mixture available ready mixed. Lay the bedding mixture on the floor, ensuring sufficient depth of mixture to support the surround off the floor about 12mm and allow to harden. A large amount of bedding mixture in the middle of the hearth helps to absorb heat and strengthens the hearth.

Note: The hearth must be sealed directly on to bare floor so no air can enter the Flue from under the hearth. It must not be bedded directly on the carpet

Attach brackets (not supplied) onto each leg using a generous amount 2 part epoxy adhesive and allow to harden

Determine the position of the legs, which is central to both the hearth and the builders opening and mark off the position on the wall with a pencil and drill holes to attach the brackets and then fit wall plugs

The back panel must have a air tight seal on to the wall, so no air can enter the flue or products of combustion escape from either edges or from the behind the back panel.

Positioning the fascia and mantel

Positioning
the fascia

Positioning
the fascia

Diagram B

Position legs to previously marked positions with both legs slightly off the wall apply silicone adhesive to the back of the legs and push the legs back on to the wall and fasten back with screws and brackets.

Positioning the mantle

Position the fascia carefully on to the legs, ensuring the lipped edge sits on the legs. Secure in place with adhesive. Centralise the mantle on top of the fascia and secure in place with adhesive

Any gaps can be filled in with a good quality builder chalk

Mantle Position
